Mr. Len Perkins
KoolGlide
60 Cochise Court
Palm Coast, FL 32137

Dear Len,

The Pro Series KoolGlide System has brought new technology to the carpet installation. No longer is it necessary to directly heat the seaming tape and then butt the edges of carpet together to construct a seam. This System allows the carpet seam to be cut and butted, so one can view the seam quality, before activating the seaming tape.

The use of the Pro Series KoolGlide System requires very little training to use properly and with the seam being viewed while constructing the seam, the results creates high quality seams for rookies and seasoned pros. The RF technology is truly amazing.

This may be the best repair tool invented. Any area that you can place the special tape under can be permanently repaired. This tool does not create yarn distortion as the heat is from the tape to the adhesive. When properly used with the Koolstick Thermoplastic Seam Sealer, seam peaking is greatly improved.

This is a tool that we use and train students with proper use. Our tests have concluded that the strength of the seam performs excellent when used properly.

Sincerely,

Doyle Slaughter
